Traineeship at KVS technologies in Norway.

Norway is well known for its beautiful nature, their open-minded people and their strong focus on keeping traditional values, e.g., preserving cultural heritage, living in harmony with nature and developing cutting edge technologies.

It seems to be the case that, as a person with a strong interest in nature and technology Norway is the place to be!

Probably the most exciting part at the start, was to experience the Scandinavian summer with these ridiculous long evenings of daylight. But not just the climate and the nature left his marks in my memories. The company KVS technologies was a great place to work. I was honoured to experience a very exciting and impressing company spirit. The team was steadily growing and was consisting out of friendly, smart and open-minded people from various disciplines coming from all over the world (e.g., Greece and India).

Maybe just a quick tip for these who are going to read these few lines for getting an idea if they should also do an internship or exchange program. Your exchange programme might cost you a bit of overcoming. Let it be it financial, a lot of paperwork, or an additional year before you finally finish your degree. I can assure you, once you overcome this fear you will love and appreciated the things you have learned during your internship in the same way as I did.

It was a really great experience for me to feel and live the Norwegian values!
